- Member, University of Kansas Track and Field Team (Pole Vaulting)
- Black Belt in Tae-Kwon-Do (University Program)

Apr 2016 – Nov 2016
Kanagawa University, Yokohama-shi, Kanagawa-ken
Japanese Culture and Language (Study Abroad)

Current Employer and Position:
Angolon Ltd., Europe
Full-Stack Developer (Apr 2025 – Present)
Progressed from Junior Developer (Apr 2024 – Mar 2025)

Technical Skills:

- **Languages:** JavaScript, TypeScript, Python, Node.js
- **Frontend:** React, Next.js, Redux, Tailwind, CSS/SCSS, Phaser.js, WebGL Animation
- **Backend & APIs:** Express.js, RESTful APIs, GraphQL, gRPC (with protobuf), RPC services
- **Databases:** PostgreSQL, MongoDB, MySQL
- **Infrastructure & DevOps:** Docker, Docker Compose, AWS (deployment/testing), Linux Servers (Debian-based), Server Setup, CDN Setup, MAAS
- **Other:** Stripe (payments integration), Auth systems, CI/CD pipelines, Unit Testing, Microservices Architecture, Monorepo Management, Agentic AI Integration, System Design, Data Migration, Load Balancing, Caching, Technical Trade-off Strategy
- **Tools/Methodologies:** GitHub (Version Control), Agile, Scrum

Professional Experience

Apr 2024 – Present: Angolon Ltd., Europe
Full-Stack Developer (promoted from Junior Developer in Apr 2025)

Technical Project Management Platform (20K+ users)
Technologies: Next.js, React, Tailwind, Node.js, PostgreSQL, TypeScript

- Developed and implemented a full-featured web application with 20+ API endpoints for a technical project management platform serving over 20,000 users.

- Built and deployed scalable RESTful APIs; optimized performance using Node.js clustering to reduce API response times by 8%.
- Revamped menu page and dashboard designs, significantly increasing client engagement and user satisfaction.
- Collaborated closely with UX designers to deliver a fully mobile-responsive experience in under one month.
- Engineered intuitive drag-and-drop interfaces with grid/list layouts, custom card components, advanced filtering, animations, dropdown options, and enhanced navigation for improved usability.
- Partnered with product managers to conduct customer interviews, surveys, and research to define requirements for new features (e.g., advanced filters, keyboard shortcuts).
- Enhanced security posture by implementing API token restrictions and protections against cross-origin request forgery (CSRF), mitigating operational risks.
- Conducted pilot service deployments and testing on AWS infrastructure.
- Fostered high-performance development culture through Agile/Scrum principles to streamline the software development lifecycle (SDLC).
- Contributed to an enterprise-grade monorepo structure featuring TypeScript/React frontend, Go/Express.js backend, PostgreSQL database, and gRPC/protobuf-based RPC services.
- Supported development of an agentic AI service to boost efficiency within a Scrum-based application.
- Performed ongoing product and customer research to align technical solutions with client business needs.

Key Projects Delivered for Clients (Full-Stack End-to-End Systems):

- Chain-Restaurant Online Ordering System Technologies: Node.js (backend), TypeScript, MongoDB, Authentication, Stripe (payments)
    - Designed and built a complete end-to-end ordering platform enabling direct customer orders with secure payments and authentication.
    - Delivered a reliable, production-ready solution tailored to restaurant operations.
- Japan Tour Booking Platform Technologies: Next.js, TypeScript, PostgreSQL, Authentication, Stripe (payments)
    - Created a modern booking website for tours in Japan, incorporating strong SEO practices to drive increased customer traffic.
    - Eliminated middleman payment processors, reducing costs for business owners by removing third-party cuts and streamlining the entire booking and payment flow for better efficiency and profitability.

- Agentic AI for Dynamic Dialogue in Browser Game
  Technologies: Python, OpenAI API, Phaser.js (browser game framework), MongoDB (for save state management)

    - Developed an agentic AI system using the OpenAI API wrapped in Python, guided by a central prompt document to generate context-aware responses.

- Enabled dynamic dialogue generation for side-characters, adapting lines in real-time based on situational factors, player actions, and prior choices to create immersive, personalized gameplay experiences.
- Integrated AI pitch shifting for human-written, story-driven dialogue, producing believable voice acting variations to enhance character authenticity and engagement in the browser-based RPG adventure game.

Additional Contributions During Freelance Period (Apr. 2022 – Apr.2024):

- Developed and maintained responsive web applications with high-quality UI/UX using React and TypeScript.
- Contributed to backend logic, API integrations, and database operations using Express.js and Node.js.
- Integrated secure payment solutions (e.g., Stripe) for reliable transaction processing.
- Designed scalable, containerized environments with Docker and Docker Compose.
- Optimized database performance (PostgreSQL/MySQL) by refactoring slow queries and legacy codebases.
- Participated in full development lifecycles: planning, development, testing, deployment, and environment setup.

Jul 2021 – Apr 2024: Randstad Japan, Tokyo
Recruitment Consultant (Life Science & Technical Team)

- Served as an executive search consultant specializing in Japanese pharmaceutical and IT industries, focusing on digital marketing, commercial data science, health economics & outcomes research, product marketing, and executive roles.
- Developed search strategies, attracted/evaluated top talent, managed interview processes, and closed high-value placements over multi-month cycles.
- Consulted with pharmaceutical leaders to align hiring plans with long-term business strategies and product launch timelines.
- Maintained candidate pipelines through consistent networking, sales calls, digital marketing, and lead generation.
- Achievements: Consistently exceeded annual billing targets (24M JPY); placed Head of Quality Assurance and Head of Government Affairs at global bio-pharmaceutical companies; built a digital marketing lead-generation system still in use by peers.

May 2019 – May 2021: Titan Consulting Japan, Tokyo
Recruitment Consultant

- Managed key accounts in pharmaceutical industry (Clinical Development, Medical Affairs, Marketing) for top global clients including Janssen, Novartis, and AbbVie.
- Engaged executives to promote services and match professionals to high-level positions.
- Achievements: Secured 2 exclusive and 1 retained positions; contributed to 9 placements in one year; achieved 26M JPY in billings (2020 fiscal year); key placements included Head of

Clinical Rheumatology (MD), Oncology Marketing Director, and Marketing Director in Oncology.

Additional Notes:

- Built production-ready applications across 5+ years of development experience, including a cryptocurrency platform (Node.js, PostgreSQL, TypeScript) and an RPG adventure game with save functionality (Phaser.js, MongoDB).
- **Portfolio:** https://zencode33.dev/ (for detailed project examples and visuals).
- Brings unique blend of technical expertise and business acumen from former executive recruiting background, enabling strong client communication, translation needs, and solution alignment in US and Japan environments.
